DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Specie A: Generic methods wherein neither sequencing nor catalysis are analyzed.

Specie B: Methods wherein sequencing or sequencing with catalysis is analyzed (e.g. sequencing as in instant claim 6 or sequencing with catalysis via catalytic complex analysis as in instant claim 8). Additionally, if this specie is elected then the following subspecies election is required.

Subspecies for Specie B:

Subspecie B-1: sequencing without catalytic complex involvement

Subspecie B-2: sequencing via an enzyme

Subspecie B-3: sequencing via an inorganic molecule

Subspecie B-4: sequencing via an organic molecule which is not an enzyme

The above species are distinct due to being directed to methods wherein the interactions are separate in nature such as sequencing in specie B utilizing interactions which commonly cleave polynucleotides at phosphodiester bonds versus specie A which is directed to general interactions such as physical determinations or non-sequencing chemical catalysis. These interaction types require distinct and separate

analysis due to different interaction details and are generally published separately thus documenting the undue search burden if they are searched together. Similarly, enzyme, organic, etc. subspecies also involve commonly separately published interaction determinations.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-5 and 11 are generic to the above species and subspecies.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
